

FEATURES

- Motion detection through PIR technology
- Detection diameter of up to 6m
- Lighting level sensor with human eye spectral sensitivity
- 6 motion detector channels
- 2 constant light regulation channels
- Occupancy detection
- 10 logic functions
- Total data saving on KNX bus failure
- Integrated KNX BCU
- External dimensions: Ø58 x 41mm
- Internal dimensions: Ø48.3 x 41mm
- Cutting diameter (hole saw blade): Ø51mm
- False-ceiling flush-mounted
- Conformity with the CE directives (CE-mark on the back side)

1. Detection LED indicator

2. Retaining spring

3. Programming button

4. Programming LED

5. KNX connector

Programming button: short press to set programming mode. If this button is held while plugging the device into the KNX bus, it enters the safe mode.

Programming LED: programming mode indicator (red). When the device enters the safe mode, it blinks (red) every half second. During the start-up (reset or after KNX bus failure) and if the device is not in safe mode, it emits a red flash.

GENERAL SPECIFICATIONS

CONCEPT		DESCRIPTION		
Type of device		Electric operation control device		
KNX supply	Voltage (typical)	29VDC SELV		
	Voltage range	21..31VDC		
	Maximum consumption	Voltage	mA	mW
		29VDC (typical)	4	116
24VDC ¹	10	240		
Connection type		Typical TP1 bus connector for 0.80mm Ø rigid cable		
External power supply		Not required		
Operation temperature		0°C .. +45°C ²		
Storage temperature		-20°C .. +55°C		
Operation humidity		5 .. 95%		
Storage humidity		5 .. 95%		
Complementary characteristics		Class B		
Protection class		III		
Operation type		Continuous operation		
Device action type		Type 1		
Electrical stress period		Long		
Degree of protection		IP20, clean environment		
Installation		Flush-mounted in false ceiling		
Minimum clearances		Not required		
Response on KNX bus failure		Data saving according to parameterization		
Response on KNX bus restart		Data recovery according to parameterization		
Operation indicator		The programming LED indicates programming mode (red). The motion sensor initialization, after powering up the device, is indicated through the detection LED (red blinking). The motion detections are indicated by a red flash (in case the LED is enabled).		
Weight		39g		
PCB CTI index		175V		
Housing material		PC/ABS FR V0 halogen free housing and HDPE lens.		

¹ Maximum consumption in the worst-case scenario (KNX Fan-In model).

² Temperatures over 35°C could decrease the detection range

INSTALLATION INSTRUCTIONS

1. Make a $\varnothing 51\text{mm}$ hole on the ceiling.
2. Recover the wiring and connect it to the device.
3. Insert the device into the ceiling hole and allow the retaining springs to close.
4. Fix it, paying attention that it is correctly leveled and oriented, and remove the protective plastic film from the lens.

DIMENSIONS (mm)

SAFETY INSTRUCTIONS AND ADDITIONAL NOTES

- Installation should only be performed by qualified professionals according to the laws and regulations applicable in each country.
- Do not connect the mains voltage nor any other external voltage to any point of the KNX bus; it would represent a risk for the entire KNX system. The facility must have enough insulation between the mains (or auxiliary) voltage and the KNX bus or the wires of other accessories, in case of being installed.
- Keep the device away from water (condensation over the device included) and do not cover it with clothes, paper or any other material while in use.

 The WEEE logo means that this device contains electronic parts and it must be properly disposed of by following the instructions at <https://www.zennio.com/en/legal/weee-regulation>.

- This device contains software subject to specific licences. For details, please refer to <http://zennio.com/licenses>.
